

TERRA INCOGNITA

Terra Incognita Project
Director's Program 2016 Annual Report

03-14-2017

In relation to our organization's activities in the tax year 2016, we have successfully engaged in a number of activities that further our reach and experience working in the fields of neuroscience and inter-cultural shamanic activity.

We have engaged with leading neuroscientists to support the science of understanding brain activity pre and post administration of the Bufo Alvarius medicine, and supported learnings around PTSD and brain states from the Bufo. We have canvassed leading manufacturers of EEG equipment to advance the possibilities of using technology to monitor shamanic states.

Our retreat program in August, 2016 was held in Cancun, Mexico, where we worked with the indigenous Bufo Alvarius toad medicine to examine its healing properties and gather EEG data on the brainwaves of participants. A sample of data was collected from participants which show increased neural cohesion and activity and advances our understanding. Donations to the event helped sustain our NGO in 2016 and beyond.

We have also made enormous advances in our relationship building with indigenous caretakers of this medicine, legal practitioners in Mexico, and scientists to better understand the needs of these communities and how best to serve them and our mission statement.

A handwritten signature in black ink, appearing to read 'Rak Razam', with a small heart symbol above the second 'a'.
